

SUGGESTED FEEDING TABLE*			
Babies age	Boiled water (ml)	Scoops* of	Feeds per 24 hrs
After 12 months	210	7	5

Standard reconstitution is one level scoop (Approximately 4.8g) of powder for each 30 ml of water
 #Consult your baby's physician about how much your baby should consume. This is the suggested feeding table, every baby is different
 *Only use the scoop provided in the tin
 1 Litre Milk = 140g Powder + 900ml Water

Warning: Unboiled water, unboiled utensils or incorrect dilution can make your baby ill. Incorrect storage, handling, preparation and feeding can potentially lead to adverse effects for the health of your baby. Boiled & cooled water shall be used to prepare this product & any leftover product must be discarded to reduce the risk of infection. Do not heat feeds in microwave, hot spots may occur and cause scalding.

Warning: Only prepare one feed at a time, Feed immediately and follow the instructions exactly. Do not keep unfinished feed, discard the contents. Always hold baby while feeding. Leaving baby unattended may cause choking. Infant milk substitute should be used only on the advice of a health worker as to the need for its use and the proper method of its use. Infant milk substitute is not the sole source of nourishment of an infant. Infant food shall be introduced only after the age of six months and up to the age of two years.

Caution: Careful and hygienic preparation of Infant milk substitute is most essential for health. Do not use fewer scoops than directed, since diluted feeding will not provide adequate nutrients needed by your Infant. Do not use more scoops than directed since concentrated feed will not provide the water needed by your infant. Ensure enclosed scoop is washed and thoroughly dried before use. After opening use the contents within 3 weeks or the expiry date, whichever is earlier.

WE AGREE WITH WORLD HEALTH ORGANIZATION AND OTHER LEADING MEDICAL AND HEALTH ASSOCIATION THAT BREAST MILK IS THE BEST AND MOST NATURAL FOOD FOR BABIES
